Subject Index

abietic acid
  dental materials, zinc oxide–eugenol cement, poly(methyl methacrylate), dissolution, 307
absorbable implants
  poly(L-lactide), shear strength, osteotomy, fracture fixation, 257
acrylic resins
  dental composites, hydroxyapatite, tetrahydrofurfuryl methacrylate, 1197
acute pancreatitis
  haemosorbent, haemosorbtion, antiproteinase haemosorbent, ovomucoid, 334
adhesion
  polymers, mucosa, surface energy, biocompatibility, 177
  calcium phosphates, coatings, crystal structure, 337
adhesives
  cytotoxicity, cell culture, 92
  dressings, polyurethanes, 59
adriamycin
  microspheres, chemoembolization, liver, 577
adsorption
  hydrogels, poly(acrylamide/maleic acid), swelling, bovine serum albumin, 917
agarose colonization
  biomaterials, cell culture, 1029
alginate
  chitosan, encapsulation, genetic engineering, PC12 cells, 1049
alkaline phosphatase
  hydroxyapatite, cell culture, osteopontin, collagen type 1, 536
allergy
  nickel, lymphocyte transformation test, 1157
alloys
  corrosion, metallic implants, electrochemical techniques, 1175
aluminium
  glass ionomer cements, elution, mineralization, 882
amino-groups
  colorimetry, immobilization, 289
anisotropic elasticity
  pericardium, mechanical properties, 366
anisotropy
  pericardium, mechanical properties, constitutive relationships, 374
antiproteinase haemosorbent
  haemosorbent, haemosorbtion, ovomucoid, acute pancreatitis, 334
antithrombogenicity
  thrombomodulin, poly(ether urethane urea), immobilization, platelet adhesion, 848
  human thrombomodulin, surface grafting, immobilization, enzymatic activity, 1170
artefacts of histological technique
  metal–bone interface, osseointegration, 273
artificial bone
  poly (α-hydroxy acids), bone regeneration, bone-derived growth factors, 513
artificial cartilage repair
  mechanics, morphology, durability, synovitis, 657
artificial pancreas
  hydrogels, encapsulation, 113

proteins, diffusion, poly(vinyl alcohol), hydrogels, 231
asialoglycoprotein
nanoparticles, nanosphere, carbohydrates, poly(lactic acid), 1035
bacterial adhesion
microfabrication, titanium alloys, staphylococci, 628
CSF shunts, drug delivery, drug release mechanisms, killing curve, 996
bacterial–polymer adhesion
protein–polymer interactions, 805
basic fibroblast growth factor
chitosan, methylpyrrolidinone chitosan, sustained release, wound healing, 593
bioactive glass
osteoblasts, cell culture, 97
hydroxyapatite, composite materials, sintering, microstructure, 5
implants, bone defect fillers, dental materials, 208
glass-ceramic, cyst cavities, 353
bone, hydroxyapatite, surface characterization, 865
bioadhesion
lectin, latex, nanoparticles, mucin, 899
mucoadhesion, hamster cheek pouch, 950
bioceramics
hydroxyapatite, medical plant materials, pH measurements, 905
biocompatibility
poly(ethylene terephthalate), plasma modification, 909
biocompatibility
hydroxyapatite, titanium, osteoporosis, 11
heparinization, cell culture, sterilization, 129
polymers, mucosa, surface energy, adhesion, 177
cytotoxicity, L- and D-lactic monomers, osmolarity, 251
haemodialysis, membranes, poly(acrylonitrile), 417
biosensors, glucose sensors, membranes, immunogenicity,859
osteoblasts, bone graft materials, 601
intraocular lenses, UV lacquer, PMMA, foreign body reaction, 766
biodegradation, skin substitute, 551
fibroblasts, orthopaedic implants, wear debris, 713
polyphosphazene, hydrophilic monomers, gamma radiation, graft copolymerization, 937
phosphate glass, fibres, biodegradation, iron oxide, 1057
chitosan, macrophage activation, NO production, 1215
biodegradable polymers
drug delivery, polyenamines, poly(enol-ketone), 1243
biodegradable polymers
biodegradation
calcium phosphates, plasma coatings, 146
hyaluronic acid, enzymes, 359
poly(L-lactide), mechanical properties, 439
skin substitute, biocompatibility, 551
drug delivery, polyphosphazenes, 563
poly(caprolactone),poly(DL-lactic acid), free radicals, 779
drug delivery, microspheres, growth hormone, osteoblasts, 931
phosphate glass, fibres, iron oxide, biocompatibility, 1057
poly(lactic acid), copolymers, 1209
biomaterials
hydroxyapatite, natural coral, calcium phosphate, 201
vascular prostheses, grafting, image analysis, morphology, 621
microelectrodes, Fe^{3+}, 821
prostethic heart valves, calcification, porcine valves, 815
blood–biomaterial interactions, evaluation, 737
blood compatibility, *ex vivo* test, dialysis, cytokines, 969
sutures, heart valves, mechanical properties, 981
cell culture, agarose colonization, 1029
collagen, poly(vinyl alcohol), poly(acrylic acid), polymer blends, 1229
biosensors
glucose sensors, membranes, immunogenicity, biocompatibility, 859
biosignal immobilization
cell culture,cell adhesion, cell growth, fibroblasts, 963
blood coagulation
protein adsorption, contact activation, titanium, TiO_2, 827
blood compatibility
protein adsorption, carbon, silica, radioisotopes, 323
polyurethanes, polydimethylsiloxane, contact angle, 635
biomaterials, *ex vivo* test, dialysis, cytokines, 969
blood compatibility
blood proteins
protein interactions, surface interactions, ellipsometry, 786
blood substitute
liposomes, encapsulation, clinical chemistry, histopathology, 796
blood–biomaterial interactions
biomaterials, evaluation, 737
blood–material interactions
vascular prostheses, haemocompatibility, 759
hydroxyapatite, IR optical density, pore analysis, Ca–P interaction, 643
blood–polymer interactions
surface analysis, polyurethanes, 695
bond strength
hydroxyapatite, coatings, ion beam dynamic mixing methods, solubility, 529
bone
mineral, mechanical properties, interfacial bonding, 137, cell adhesion, vitronectin, fibronectin, titanium, 213
microscopy, titanium, 194
bioactive glass, hydroxyapatite, surface characterization, 865
heat treatment, ultrastructure, collagen, 433
titanium, surface analysis, morphometry, oxide, 1062
bone apatite
ceramics, hydroxyapatite, 835
bone cement
methylene blue, fracture toughness, 1024
bone cements
glass transition temperature, creep, polymerization kinetics, water sorption, 875
bone cements composites
hydroxyapatite, 156
bone defect fillers
bioactive glass, implants, dental materials, 208
bone delipidation
supercritical fluid, carbon dioxide, bone graft, 650
bone formation
ceramics, calcium phosphates, 31
strain, micromotion chamber, 880
chitosan, osteoinduction, 1075
bone graft
bone delipidation, supercritical fluid, carbon dioxide, 650
bone graft materials
osteoblasts, biocompatibility, 601
bone grafting
DP-bioactive glass, hydroxyapatite, histological evaluation, interface reaction, 108P
bone implant
interface, radiographic imaging, microdensitometry, X-ray fluorescence, 615
bone ingrowth
hydroxyapatite coating, titanium, porous coating, 926
bone regeneration
poly(α-hydroxy acids), artificial bone, bone-derived growth factors, 513
bone-derived growth factors
poly(α-hydroxy acids), artificial bone, bone regeneration, 513
bone–implant interface
hydroxyapatite, mandibular grafting, 609
bovine serum albumin
hydrogels, poly(acrylamide/maleic acid), swelling, adsorption, 917
brain cancer
polyanhydrides, polymer elimination, 681
Ca–P interaction
hydroxyapatite, blood–material interactions, ir optical density, pore analysis, 643
calcification
heparinization, testing, 35
calcification
heart valves, pericardium, 465
biomaterials, prostethic heart valves, porcine valves, 815
polyethylene glycols, hydrogels, molecular weight dependence, 921
calcium phosphate
biomaterials, hydroxyapatite, natural coal, 201
calcium phosphates
monocytes, vitamin D3
interferons, 25
ceramics, bone formation, 31
plasma coatings, biodegradation, 146
characterization, EDXA, ESCA, 183
adhesion, coatings, crystal structure, 337
hydroxyapatite, resorbable materials, 429
hydroxyapatite, fluorapatite, tricalcium phosphate, plasma spraying, 543
protein adsorption, hydroxyapatite, enhanced chemiluminescence, fibronectin, 842
synthesis, osteotransductivity, 1019
carbohydrates
nanoparticles, nanosphere, asialoglycoprotein, poly(lactic acid), 1035
carbon
protein adsorption, blood compatibility, silica, radioisotopes, 323
carbon dioxide
bone delipidation, supercritical fluid, bone graft, 650
cartilage
composites, meniscal substitution, joints, synovitis, 223
tissue engineering, polymers, chondrocytes, 774
cartilages
transplantation, tissue engineering, 451
cell adhesion
bone, vitronectin, fibronectin, titanium, 213
surface wetting, lymphocytes, protein adsorption, 423
microspheres, polymorphonuclear leucocytes, phagocytosis, 570
cell adhesion
cell culture, cell growth, fibroblasts, biosignal immobilization, 963
cell and tissue culture
wetting, hydrophobic polymers, poly(L-lactic acid), poly(DL-lactic-co-glycolic acid), 55
cell behaviour
dental materials, glass ceramics, implants, 1001
cell culture
bioactive glass, osteoblasts, 97
adhesives, cytotoxicity, 92
cyanoacrylate, cytotoxicity, 63
heparinization, biocompatibility, sterilization, 129
hydroxyapatite, alkaline phosphatase, osteopontin, collagen type 1, 536
cell adhesion, cell growth, fibroblasts, biosignal immobilization, 963
biomaterials, agarose colonization, 1029
cell growth
cell culture, cell adhesion, fibroblasts, biosignal immobilization, 963
cell–polymer interactions
surface modification, surface treatment, 705
cell–surface attachment
ceramics, epithelial cells, fibroblasts, 342
ceramics
calcium phosphates, bone formation, 31
bone apatite, hydroxyapatite, 835
cell–surface attachment, epithelial cells, fibroblasts, 342
drug delivery, haemoglobin, molecular conformation, nanoparticles, 1201
characterization
calcium phosphates, EDXA, ESCA, 183
nerve guide, polylactides, degradation, mechanical properties, 189
chemical properties
vascular prostheses, morphology, physical properties, polyurethanes, 483
chemoembolization
microspheres, adriamycin, liver, 577
chitosan
papain, immobilization, 107
methylpyrrolidinone chitosan, basic fibroblast growth factor, sustained release, wound healing, 593
alginate, encapsulation, genetic engineering, PC12 cells, 1049
bone formation, osteoinduction, 1075
biocompatibility, macrophage activation, NO production, 1215
chondrocytes
cartilage, tissue engineering, polymers, 774

chromium
serum proteins, Co–Cr-alloy, corrosion, cobalt, 262
clinical chemistry
blood substitute, liposomes, encapsulation, histopathology, 796
Co–Cr-alloy
serum proteins, corrosion, chromium, cobalt, 262
coatings
adhesion, calcium phosphates, crystal structure, 337
microstructure, crystal structure, hydroxyapatite, 396
hydroxyapatite, lasers, 522
hydroxyapatite, ion beam dynamic mixing methods, solubility, bond strength, 529
hydroxyapatite, interface shear strength, surface roughness, plasma spray, 1187
hydroxyapatite, interface shear strength, surface roughness, plasma spray, 1187
cobalt
serum proteins, Co–Cr-alloy, corrosion, chromium, 262
cochlear implant
implant material, hydrogel, 1161
collagen
drug delivery, hydrogels, pHEMA, FITC–BSA, 383
bone, heat treatment, ultrastructure, 433
collagen
xenografts, tendons, ligaments, glutaraldehyde, 745
wound healing, growth factors, extracellular matrices, fibrin, 665
biomaterials, poly(vinyl alcohol), poly(acrylic acid), polymer blends, 1229
collagen fibres
extracellular matrix, self-assembly, dehydrothermal cross-linking, 507
collagen type 1
hydroxyapatite, cell culture, alkaline phosphatase, osteopontin, 536
collagens
hydrogels, pH sensitivity, 985
cross-linking, mechanical properties, swelling, 1082
colorimetry
immobilization, amino-groups, 289
composite materials
hydroxyapatite, bioactive glass, sintering, microstructure, 5
composites
meniscal substitution, joints, cartilage, synovitis, 223
constitutive relationships
pericardium, mechanical properties, anisotropy, 374
contact activation
protein adsorption, blood coagulation, titanium, tiO_2, 827
contact angle
polyurethanes, polydimeethylsiloxane, blood compatibility, 635
copolymerization
corneal epithelial cells, HEMA, silicone rubber, 163
copolymers
membranes, swelling ratio, enzymatic degradation, 944
biodegradation, poly(lactic acid), 1209
corneal epithelial cells
HEMA, copolymerization, silicone rubber, 163
corrosion
serum proteins, Co–Cr-alloy, chromium, cobalt, 262
alloys, metallic implants, electrochemical techniques, 1175
alloys, metallic implants, electrochemical techniques, 1175
coupling reactions
polymer surface modification, graft polymerization, 725
creep
bone cements, glass transition temperature, polymerization kinetics, water sorption, 875
cross-linking
NADH-cytochrome b5 reductase, immobilization, gelatin, 587
fibronectin, wound healing, heparin, fibroblast growth factor, 457
drug delivery, hydrogels, 689
collagens, mechanical properties, swelling, 1082
cryosubstitution
implants, titanium, electropolishing, immunolocalization, 17
crystal structure
adhesion, calcium phosphates, coatings, 337
microstructure, hydroxyapatite, coatings, 396
crystalization
hydroxyapatite, plasma coating, heat treatment, 151
CSF shunts
bacterial adhesion, drug delivery, drug release mechanisms, killing curve, 996
cyanoacrylate
cytotoxicity, cell culture, 63
cyst cavities
bioactive glass, glass-ceramic, 353
cytarabine
drug delivery, hydrogels, 1181
cytokines
hydrogels, wound model, flow cytometry, immunology, 853
blood compatibility, biomaterials, *ex vivo* test, dialysis, 969
cytotoxicity
adhesives, cell culture, 92
cyanoacrylate, cell culture, 63
biocompatibility, L- and D-lactic monomers, osmolarity, 251
dacron
teflon, meniscus, prosthesis, 243
silver coating, polyurethane catheters, long-term implantation test, tissue reaction, 753
degradation
vein grafting, supporting prostheses, 83
nerve guide, polylactides, characterization, mechanical properties, 189
dehydrothermal cross-linking
collagen fibres, extracellular matrix, self-assembly, 507
dental composites
hydroxyapatite, acrylic resins, tetrahydrofurfuryl methacrylate, 1197
dental materials, photopolymerization, rate kinetics, 1221
dental implants
loading system, histology, 390
dental materials
bioactive glass, implants, bone defect fillers, 208
glass-ionomer cements, zinc silicates, 299
zinc oxide–eugenol cement, abietic acid, poly(methyl methacrylate), dissolution, 307
methacrylates, wear testing, silane coupling, 1152
glass ceramics, cell behaviour, implants, 1001
zinc phosphate cement, lactic acid jet test, ISO 9917, erosion, 1008
methacrylates, wear testing, silane coupling, 1152
dental composites, photopolymerization, rate kinetics, 1221
dentine
dentistry, laser, enamel, precision machining, 1013
lasers, Nd:YAG, enamel, 1145
dentistry
laser, enamel, dentine, precision machining, 1013
dialysis
blood compatibility, biomaterials, *ex vivo* test, cytokines, 969
diffusion
proteins, poly(vinyl alcohol), hydrogels, artificial pancreas, 231
dissolution
dental materials, zinc oxide–eugenol cement, abietic acid, poly(methyl methacrylate), 307
titanium alloys, serum, surface treatment, titanium dioxide, 894
DP-bioactive glass
bone grafting, hydroxyapatite, histological evaluation, interface reaction, 1087
dressings
adhesives, polyurethanes, 59
drug delivery
insulin, glucose, 121
microspheres, ion-exchange, hydrogels, 38
microspheres, spray drying, piroxicam, polylactides, 49
hydrogels, collagen, pHEMA, FITC–BSA, 383
biodegradation, polyphosphazenes, 563
hydrogels, cross-linking, 689
microspheres, biodegradation, growth hormone, osteoblasts, 931
hydrogels, cytarabine, 1181
bacterial adhesion, CSF shunts, drug release mechanisms, killing curve, 996
hydrogels, cytarbine, 1181
ceramics, haemoglobin, molecular conformation, nanoparticles, 1201
biodegradable olymers, polyenamines, poly(enol-ketone), 1243
drug release mechanisms
bacterial adhesio, CSF shunts, drug delivery, killing curve, 996
durability
artificial cartilage repair, mechanics, morphology, synovitis, 657
EDXA
calcium phosphates, characterization, ESCA, 183
electrochemical techniques
alloys, corrosion, metallic implants, 1175
electropolishing
implants, titanium, cryosubstitution, immunolocalization, 17
ellipsometry
blood proteins, protein interactions, surface interactions, 786
elution
glass ionomer cements, aluminium, mineralization, 882
enamel
dentistry, laser, dentine, precision machining, 1013
lasers, Nd:YAG, dentine, 1145
encapsulation
hydrogels, artificial pancreas, 113
blood substitute, liposomes, clinical chemistry, histopathology, 796
chitosan, alginate, genetic engineering, PC12 cells, 1049
endovascular stents
radiopaque, haemocompatibility, 1122
enhanced chemiluminescence
protein adsorption, calcium phosphates, hydroxyapatite, fibronectin, 842
enzymatic activity
human thrombomodulin, surface grafting, immobilization, antithrombogenicity, 1170
enzymatic activity
enzymatic degradation
copolymers, membranes, swelling ratio, 944
enzymes
hyaluronic acid, biodegradation, 359
vascular prostheses, polyurethanes, surface characterization, 1129
epithelial cells
cell-surface attachment, ceramics, fibroblasts, 342
erosion
dental materials, zinc phosphate cement, lactic acid jet test, ISO 9917, 1008
ES-HS
immobilization, photosensitive heterobifunctional crosslinking reage heparin, platelet adhesion test, 1043
ESCA
calcium phosphates, characterization, EDXA, 183
evaluation
biomaterials, blood–biomaterial interactions, 737
ex vivo test
blood compatibility, biomaterials, dialysis, cytokines, 969
external fixator pins
stresses, pin–bone interface, finite element analysis, 471
extracellular matrices
wound healing, growth factors, collagen, fibrin, 665
extracellular matrix
collagen fibres, self-assembly, dehydrothermal cross-linking, 507
$Fe^{(1)}$
microelectrodes, biomaterials, 821
fibres
phosphate glass, biodegradation, iron oxide, biocompatibility, 1057
fibrin
wound healing, growth factors, extracellular matrices, collagen, 665
fibroblast growth factor
fibronectin, wound healing, heparin, cross-linking, 457
fibroblasts
cell-surface attachment, ceramics, epithelial

cells, 342
biocompatibility, orthopaedic implants, wear debris, 713
cell culture, cell adhesion, cell growth, biosignal immobilization, 963
fibronectin
bone, cell adhesion, vitronectin, titanium, 213
protein adsorption, calcium phosphates, hydroxyapatite, enhanced chemiluminescence, 842
wound healing, heparin, fibroblast growth factor, cross-linking, 457
filament winding
vascular prostheses, mechanical properties, 1115
finite element analysis
stresses, pin–bone interface, external fixator pins, 471
FITC–BSA
drug delivery, hydrogels, collagen, pHEMA, 383
flow cytometry
hydrogels, wound model, cytokines, immunology, 853
fluorapatite
calcium phosphates, hydroxyapatite, tricalcium phosphate, plasma spraying, 543
foreign body reaction
intraocular lenses, UV lacquer, PMMA, biocompatibility, 766
fracture fixation
poly(L-lactide), absorbable implants, shear strength, osteotomy, 257
fracture toughness
bone cement, methylene blue, 1024
free radicals
poly(caprolactone), poly(DL-lactic acid), biodegradation, 779
gamma radiation
polyphosphazene, hydrophilic monomers, graft copolymerization, biocompatibility, 937
gamma radiation
gelatin
NADH–cytochrome b5 reductase, immobilization, cross-linking, 587
genetic engineering
chitosan, alginate, encapsulation, PC12 cells, 1049
glass ceramics
dental materials, cell behaviour, imlants, 1001
glass ionomer cements
aluminium, elution, mineralization, 882
glass transition temperature
bone cements, creep, polymerization kinetics, water sorption, 875
glass-ceramic
bioactive glass, cyst cavities, 353
glass-ionomer cements
dental materials, zinc silicates, 299
glucose
drug delivery, insulin, 121
glucose sensors
biosensors, membranes, immunogenicity, biocompatibility, 859
glutaraldehyde
wound dressings, pericardium, 68
xenografts, tendons, ligaments, collagen, 745
graft copolymerization
polyphosphazene, hydrophilic monomers, gamma radiation, biocompatibility, 937
graft copolymerization
polymer surface modification, coupling reactions, 725
grafting
vascular prostheses, biomaterials, image analysis, morphology, 621
granulates
hydroxyapatite, porosity control, 474
growth factors
wound healing, extracellular matrices, collagen, fibrin, 665
growth hormone
drug delivery, microspheres, biodegradation, osteoblasts, 931
haemocompatibility
vascular prostheses, blood–material interactions, 759
radiopaque, endovascular stents, 1122
haemodialysis
membranes, poly(acrylonitrile), biocompatibility, 417
haemoglobin
ceramics, drug delivery, molecular conformation, nanoparticles, 1201
haemosorbent
proteinase inhibitor, immobilization, 285
haemosorbtion, antiproteinase, haemosorbent, ovomucoid, acute pancreatitis, 334
haemosorbtion
haemosorbent, antiproteinase haemosorbent, ovomucoid, acute pancreatitis, 334
hamster cheek pouch
bioadhesion, mucoadhesion, 950
heart valves
sutures, prostheses, 172
calcification, pericardium, 465
biomaterials, sutures, mechanical properties, 981
heat treatment
hydroxyapatite, plasma coating, crystalization, 151
bone, ultrastructure, collagen, 433
HEMA
corneal epithelial cells, copolymerization, silicone rubber, 163
heparin
fibronectin, wound healing, fibroblast growth factor, cross-linking, 457
immobilization, photosensitive heterobifunctional crosslinking reage ES-HS, platelet adhesion test, 1043
heparinization
calcification, testing, 35
biocompatibility, cell culture, sterilization, 129
heparinized surfaces
polymer–protein interactions, polyurethanes, 955
histological evaluation
bone grafting, DP-bioactive glass, hydroxyapatite, interface reaction, 1087
histology
dental implants, loading system, 390
histopathology
blood substitute, liposomes, encapsulation, clinical chemistry, 796
human thrombomodulin
surface grafting, immobilization, antithrombogenicity, enzymatic activity, 1170
hyaluronic acid
biodegradation, enzymes, 359
hydrogel
cochlear implant, implant material, 1161
hydrogels
microspheres, ion-exchange, drug delivery, 38
artificial pancreas, encapsulation, 113
proteins, diffusion, poly(vinyl alcohol), artificial pancreas, 231
drug delivery, collagen, pHEMA, FITC–BSA, 383
urease, meep, immobilization, 502
wound model, cytokines, flow cytometry, immunology, 853
drug delivery, cross-linking,689
poly(acrylamide/maleic acid), swelling, adsorption, bovine serum albumin, 917
hydrogels
calcification, polyethylene, glycols, molecular weight dependence, 921
drug delivery, cytarabine, 1181
collagens, pH sensitivity, 985
hydrolysis
hydroxyapatite, surface characterization, X-ray photoelectron spectroscopy, ir, 269
hydrophilic monomers
polyphosphazene, gamma radiation, graft copolymerization, biocompatibility, 937
hydrophobic polymers
cell and tissue culture, wetting, poly(L-lactic acid), poly(DL-lactic-co-glycolic acid), 55
hydroxyapatite
titanium, osteoporosis, biocompatibility, 11
plasma coating, heat treatment, crystalization, 151
composite materials, bioactive glass, sintering, microstructure, 5
biomaterials, natural coral, calcium phosphate, 201
hydrolysis, surface characterization, X-ray photoelectron spectroscopy, ir, 269
bone cements composites, 156
bone apatite, ceramics, 835

nerve guide
polylactides, characterization, degradation, mechanical properties, 189
Ni–Ti alloy wire
intermaxillary fixation, mechanical properties, 71
nickel
allergy, lymphocyte transformation test, 1157
NO production
chitosan, biocompatibility, macrophage activation, 1215
orthopaedic implants
biocompatibility, fibroblasts, wear debris, 713
osmolarity
biocompatibility, cytotoxicity, L- and D-lactic monomers, 251
osmolarity
osseointegration
metal–bone interface, artefacts of histological technique, 273
osteoblasts
bioactive glass, cell culture, 97
biocompatibility, bone graft materials, 601
drug delivery, microspheres, biodegradation, growth hormone, 931
osteoinduction
chitosan, bone formation, 1075
osteopontin
hydroxyapatite, cell culture, alkaline phosphatase, collagen type 1, 536
osteoporosis
hydroxyapatite, titanium, biocompatibility, 11
osteotomy
poly(L-lactide), absorbable implants, shear strength, fracture fixation, 257
osteotransductivity
calcium phosphates, synthesis, 1019
ovomucoid
haemosorbent, haemosorbtion, antiproteinase haemosorbent, acute pancreatitis, 334
oxide
titanium, surface analysis, morphometry, bone, 1062
pH measurements
hydroxyapatite, bioceramics, medical implant materials, 905
papain
immobilization, chitosan, 107
PC12 cells
chitosan, alginate, encapsulation, genetic engineering, 1049
PEO–PPO surfactants
poly(DL-lactide co-glycolide), mocrospheres, surface modification, 673
pericardium
wound dressings, glutaraldehyde, 68
mechanical properties, constitutive relationships, anisotropy, 374
mechanical properties, anisotropic elasticity, 366
heart valves, calcification, 465
pH sensitivity
hydrogels, collagens, 985
phagocytosis
microspheres, cell adhesion, polymorphonuclear lymphocytes, 570
pHEMA
drug delivery, hydrogels, collagen, FITC–BSA, 383
phosphate glass
fibres, biodegradation, iron oxide, biocompatibility, 1057
photopolymerization
dental materials, dental composites, rate kinetics, 1221
photosensitive heterobifunctional crosslinking reagent
immobilization, heparin, ES-HS, platelet adhesion test, 1043
physical properties
vascular prostheses, chemical properties, morphology, polyurethanes, 483
pin–bone interface
stresses, finite element analysis, external fixator pins, 471
piroxicam
microspheres, drug delivery, spray drying, polylactides, 49
plasma coating
hydroxyapatite, heat treatment, crystallization, 151
plasma coatings
calcium phosphates, biodegradation, 146
plasma modification
poly(ethylene terephthalate), biocompatibility, 909
plasma spray
hydroxyapatite, coatings, interfce shear strength, surface roughness, 1187
plasma spray
plasma spraying
calcium phosphates, hydroxyapatite, fluorapatite, tricalcium phosphate, 543

platelet adhesion
thrombomodulin, poly(ether urethane urea), immobilization, anntithrombogenicity, 848
platelet adhesion test
immobilization, photosensitive heterobifunctional crosslinking reage heparin. ES-HS, 1043
PMMA
intraocular lenses, UV lacquer, foreign body reaction, biocompatibility, 766
poly (alpha-hydroxy acids)
artificial bone, bone regeneration,bone-derived growth factors, 513
poly(acrylamide/maleic acid)
hydrogels, swelling, adsorption, bovine serum albumin, 917
poly(acrylic acid)
biomaterials, collagen, poly(vinyl alcohol), polymer blends, 1229
poly(acrylonitrile)
haemodialysis, membranes, biocompatibility, 417
poly(acryloyl morpholine)
macromonomers, multifunctional polymers, poly(amidoamines), poly(vinylpyrrolidinone), 1235
poly(amidoamines)
macromonomers, multifunctional polymers, poly(vinylpyrrolidinone), poly(acryloyl morpholine), 1235
poly(caprolactone)
poly(DL-lactic acid), biodegradation, free radicals, 779
poly(DL-lactic acid)
poly(caprolactone), biodegradation, free radicals, 779
poly(DL-lactic-co-glycolic acid)
cell and tissue culture, wetting, hydrophobic polymers, poly(L-lactic acid), 55
poly(DL-lactide co-glycolide)
mocrospheres, PEO–PPO surfactants, surface modification, 673
poly(enol-ketone)
drug delivery, biodegradable polymers, polyenamines, 1243
poly(ether urethane urea)
thrombomodulin, immobilization, antithrombogenicity, platelet adhesion, 848
poly(ethylene glycol)
protein adsorption, surface modification, polymer grafting, polyurethane, 278
poly(ethylene terephthalate)
plasma modification, biocompatibility, 909
poly(L-lactic acid)
cell and tissue culture, wetting, hydrophobic polymers, poly(DL-lactic-co-glycolic acid), 55
poly(L-lactide)
absorbable implants, shear strength, osteotomy, fracture fixation, 257
mechanical properties, biodegradation, 439
poly(lactic acid)
nanoparticles, nanosphere, carbohydrates, asialoglycoprotein, 1035
biodegradation, copolymers, 1209
poly(methyl methacrylate)
dental materials, zinc oxide–eugenol cement, abietic acid, dissolution, 307
poly(vinyl alcohol)
proteins, diffusion, hydrogels, artificial pancreas, 231
biomaterials, collagen, poly(acrylic acid), polymer bends, 1229
poly(vinylpyrrolidinone)
macromonomers, multifunctional polymers, poly(amidoamines), poly(acryloyl morpholine), 1235
polyanhydrides
brain cancer, polymer elimination, 681
polydimethylsiloxane
polyurethanes, silicone urea-urethanes, surface properties, 408
polyurethanes, blood compatibility, contact angle, 635
polyenamines
drug delivery, biodegradable polymers, poly(enol-ketone), 1243
polyethylene glycols
calcification, hydrogels, molecular weight dependence, 921
polyethylene glycols
polylactides
microspheres, drug delivery, spray drying, piroxicam, 49
nerve guide, characterization, degradation, mechanical properties, 189
polymer blends
biomaterials, collagen, poly(vinyl alcohol), poly(acrylic acid), 1229
polymer elimination
polyanhydrides, brain cancer, 681
polymer grafting
protein adsorption, surface modification, polyurethane, poly(ethylene glycol), 278
polymer surface modification
graft polymerization, coupling reactions, 725
polymer–protein interactions
polyurethanes, heparinized surfaces, 955
polymerization kinetics
bone cements, glass transition temperature, creep, water sorption, 875
polymers
mucosa, surface energy, adhesion, biocompatibility, 177
cartilage, tissue engineering, chondrocytes, 774
polymorphonuclear leucocytes
microspheres, cell adhesion, phagocytosis, 570
polyphosphazene
hydrophilic monomers, gamma radiation, graft copolymerization, biocompatibility, 937
polyphosphazenes
drug delivery, biodegradation, 563
polyurethane
protein adsorption, surface modification, polymer grafting, poly(ethylene glycol), 278
polyurethane catheters
silver coating, dacron, long-term implantation test, tissue reaction, 753
polyurethanes
adhesives, dressings, 59
polydimethylsiloxane, silicone urea-urethanes, surface properties, 408
vascular prostheses, chemical properties, morphology, physical properties, 483
polydimethylsiloxane, blood compatibility, contact angle, 635
blood–polymer interactions, surface analysis, 695
polymer–protein interactions, heparinized surfaces, 955
vascular prostheses, *in vivo* implantation, 1099
vascular prostheses, enzymes, surface characterization, 1129
porcine valves
biomaterials, prostethic heart valves, calcification, 815
pore analysis
hydroxyapatite, blood–material interactions, ir optical density, Ca–P interaction, 643
porosity control
granulates, hydroxyapatite, 474
porous coating
bone ingrowth, hydroxyapatite coating, titanium, 926
precision machining
dentistry, laser, enamel, dentine, 1013
prostethic heart valves
biomaterials, calcification, porcine valves, 815
prostheses
sutures, heart valves, 172
prosthesis
dacron, teflon, meniscus, 243
protein adsorption
blood compatibility, carbon, silica, radioisotopes, 323
surface modification, polymer grafting, polyurethane, poly(ethylene glycol), 278
surface wetting, lymphocytes, cell adhesion, 423
calcium phosphates, hydroxyapatite, enhanced chemiluminescence, fibronectin, 842
contact activation, blood coagulation, titanium, TiO_2, 827
protein adsorption
protein interactions
blood proteins, surface interactions, ellipsometry, 786
protein–polymer interactions
bacterial–polymer adhesion, 805
proteinase inhibitor
haemosorbent, immobilization, 285
proteins
diffusion, poly(vinyl alcohol), hydrogels, artificial pancreas, 231
radiographic imaging
interface, bone implant, microdensitometry, X-ray fluorescence, 615
radioisotopes
protein adsorption, blood compatibility, carbon, silica, 323
radiopaque
haemocompatibility, endovascular stents, 1122
rate kinetics
dental materials, dental composites, photopolymerization, 1221
resorbable materials
calcium phosphates, hydroxyapatite, 429
self-assembly
collagen fibres, extracellular matrix, dehydrothermal cross-linking, 507
serum
titanium alloys, dissolution, surface treatment, titanium dioxide, 894
serum proteins
Co–Cr-alloy, corrosion, chromium, cobalt, 262
shear strength
poly(L-lactide), absorbable implants, osteotomy, fracture fixation, 257
silane coupling
dental materials, methacrylates, wear testing, 1152
silane coupling
silica
protein adsorption, blood compatibility, carbon, radioisotopes, 323
silicone rubber
corneal epithelial cells, HEMA, copolymerization, 163
silicone urea–urethanes
polyurethanes, polydimethylsiloxane, surface properties, 408
silver coating
polyurethane catheters, dacron, long-term implantation test, tissue reaction, 753
sintering
hydroxyapatite, composite materials, bioactive glass, microstructure, 5
skin substitute
biodegradation, biocompatibility, 551
solubility
hydroxyapatite, coatings, ion beam dynamic mixing methods, bond strength, 529
spray drying
microspheres, drug delivery, piroxicam, polylactides, 49
standards
surgical implants, 403
staphylococci
bacterial adhesion, microfabrication, titanium alloys, 628
sterilization
heparinization, biocompatibility,cell culture, 129
strain
bone formation, micromotion chamber, 880
stresses
pin–bone interface, finite element analysis, external fixator pins, 471
supercritical fluid
bone delipidation, carbon dioxide, bone graft, 650
supporting prostheses
